**TAGETIK SUPPORTS THE  
NEXT WAVE OF MICROSOFT'S PRODUCTIVITY  
TECHNOLOGIES**

*'Tagetik 3.0 Enabled by Microsoft SharePoint Server 2010'  
to manage financial processes and maximize the power of  
Microsoft Business Intelligence platform*

**Lucca (Italy). May 12, 2010** – Tagetik, a global Microsoft Gold Certified Partner and provider of Performance Management, Financial Governance and Business Intelligence software solutions, today announced its support for **Microsoft® SharePoint® Server 2010**, as part of its major technological accomplishments around **Microsoft Corp.'s Business Intelligence, communication and collaboration** plans.

The announcement follows today's U.S. launch of Microsoft's Next Wave of Productivity, and marks the first anniversary of the release of 'Tagetik 3.0 Enabled by Microsoft Office SharePoint Server 2007' software, released in March 2009. The complete advanced platform provides companies with well-known application tools such as Microsoft SharePoint Server 2010, Microsoft Office Professional 2010, and Microsoft SQL Server 2008 R2, while supporting

compliance and performance management processes across the organization and providing benefits for critical decision-making.

### **The Next Wave of Productivity**

“Because of the support for Microsoft SharePoint Server 2010 and Microsoft’s sophisticated Business Intelligence platform, ‘Tagetik 3.0 Enabled by Microsoft SharePoint Server 2010’ creates value by simplifying complex business processes,” explained Manuel Vellutini, Chief Operating Officer at Tagetik. “The software has been created to support CFOs in today’s complex organizations that need to empower the management of financial processes and compliances (i.e. budgeting, planning, closing, consolidation, reporting, SOX, IFRS) through advanced reporting and analysis, (i.e. power pivoting), Communication, and Collaboration tools (i.e. SharePoint Server). Companies as a whole can quickly understand the total financial impact of key strategic decisions, easily communicate with increasingly large and international teams – sharing documents, activities, calendars, and deadlines – as well as run multiple ‘what-if’ scenarios and assess their impact on business performance. And, ultimately, the Tagetik and Microsoft solution improves communication and decision-making among major business functions within a unified, controlled environment while reducing implementation time and leveraging existing investment for a lower total cost of ownership,” concluded Vellutini.

“With Microsoft SharePoint Server 2010 and Tagetik 3.0, we’re providing new ways for people to work better together while increasing productivity,” said Meera Mehta, Director of SharePoint Partner Marketing at Microsoft Corp. “Tagetik 3.0 complements the features and functionality in SharePoint Server, powering productivity and collaboration across the applications people already know and use.”

Just one year after its international launch, many companies in all industries have selected ‘Tagetik 3.0 Enabled by Microsoft SharePoint Server 2010’, banking on a flexible software and standard ‘state-of-the-art’ technology.
